

A New Way to Register

- when it has to be **right**

In-Field

Capture, tag, register and add assets to project data

Publish and deliver project files directly to clients and collaborators

Users can now complete their project entirely in the field. Capture, register and publish a complete project entirely from a phone or tablet without ever processing or publishing in the office. The in-field workflow is a game changer for new and experienced users alike to deliver a project quickly or communicate with collaborators before leaving the field.

This is the next generation of registration for the next generation of reality capture user!

Field-to-Office

Conduct full QA, refine registration results, clean data and combine projects

Users can refine their projects in the office to tighten a registration, clean up noise, conduct a quick classification and more. All tags and assets added in the field are available to users inside of Cyclone REGISTER 360 PLUS making it possible to communicate notes and important information between the field and the office. PLUS publish LGS, RCP and more without any additional licence!

LGS and RCP files make it easy to integrate with Leica Geosystems and Autodesk products downstream to generate analyses and valuable deliverables for your clients.

Create Your Workflow

- when it has to be **right**

	BASIC New Reality Capture Users	BLK Edition Optimised for BLK Sensors	Standard Maximum Flexibility	Add-Ons Level-up your Workflow
Capture	 <p>Cyclone FIELD 360 BASIC allows users to capture and register scans with their LiDAR enabled tablet or phone and publish those scans to E57.</p> <p>Cyclone FIELD 360 is the only app that allows user to register LiDAR scans.</p>	 <p>Cyclone FIELD 360 (BLK Edition) allows users to capture and register scans with their LiDAR enabled tablet or phone and BLK devices and publish those scans to E57.</p> <p>Cyclone FIELD 360 (BLK Edition) is included free of charge with purchase of Cyclone REGISTER 360 PLUS (BLK Edition).</p>	 <p>Cyclone FIELD 360 allows users to capture and register scans with their LiDAR enabled tablet or phone and all Leica Geosystems reality capture devices and publish those scans to E57.</p> <p>Cyclone FIELD is included free of charge with purchase of Cyclone REGISTER 360 PLUS.</p>	 Quick Plan <p>Cyclone FIELD 360 Quick Plan is an optional add on that allows users of any Cyclone FIELD 360 version to create Floor and Room Plans directly from your phone or tablet and publish them from the field or continue working on them downstream.</p>
Prepare		 <p>Cyclone REGISTER 360 PLUS (BLK Edition) includes all of the functionality of Cyclone REGISTER 360 (BLK Edition) including registration, cleaning, GeoTagging, Asset Management and project QA for BLK sensors PLUS new publishing capabilities including LGS files which are fully compatible with all downstream products including the FREE TruView desktop viewer.</p>	 <p>Cyclone REGISTER 360 PLUS includes all of the functionality of Cyclone REGISTER 360 including registration, cleaning, GeoTagging, Asset Management and project QA for all Leica Geosystems and third-party reality capture sensors PLUS new publishing capabilities including LGS files which are fully compatible with all downstream products including the FREE TruView desktop viewer.</p> <p>Cyclone REGISTER 360 PLUS also includes access to Cyclone REGISTER.</p>	 <p>Cyclone WORKFLOW is an optional add on that helps you take your office productivity and collaboration to the next level with automatic cleaning, anonymisation, extra publishing format support and support for models and VR in TruView.</p> <p>Cyclone WORKFLOW is formerly known as Cyclone PUBLISHER Pro. All current owners can continue to use their existing licence.</p>
Manage	 <p>A file-based workflow is suitable for any user whether working with E57 files from the field or LGS files from the office. A file-based workflow is the simplest way to get started in reality capture.</p>	 <p>Cyclone ENTERPRISE adds simplicity and security to your data management. Rather than sharing large files that can be opened by anyone, assign individual users access rights to specific projects that they can open in any of Leica Geosystem's Analysis products.</p>		
Analyse	<p>Leica Geosystems offers a range of analysis products that are compatible with data from all sensors and formats from upstream products.</p>	 <p>Cyclone 3DR is an all-in-one deliverable solution for users who want to prepare deliverables and conduct analyses such as floor plans, BIM models, classifications, DTM, class analysis and BIM inspection.</p>	 <p>CloudWorx is a unique offering from Leica Geosystems that allows users to open their reality capture projects directly inside their chosen CAD package to model directly from the points and access all project information. Users can make use of Quick Plans, GeoTags and Assets captured in the field and leave Tags for other users when connected to Cyclone ENTERPRISE.</p>	 <p>Leica Geosystems offers additional analysis solutions for specialised applications such as crash scene investigation, concrete analysis and more which are all compatible with either a file or server- based data management solution.</p>
