- ***Bug fixed where panoramic images failed to display in the TruSpace Viewer when working with JetStream data***

Leica CloudWorx 2.1.1 for PDMS Compatibility and Upgrades

Upgrading to Leica CloudWorx 2.1.1 from Leica CloudWorx 2.1

You must have Administrator-level privileges on your workstation to correctly install Leica CloudWorx software.

If using IMP data, first run the current Cyclone installer if you do not have a version of Cyclone installed. Otherwise/Next run the CloudWorx 2.1.1 InstallShield and follow the directions in the InstallShield Wizard to proceed with the installation. Please heed the warning message about compatibility of earlier version databases. We strongly recommend that when upgrading, please select the "Remove" option when it appears, rather than the "Repair" option.

All users with a valid license(s) for CloudWorx 2.1.x or later, currently valid CCP, or with CCP which was valid as late as April 18, 2016, can run this new version with no new license required.

Compatibility with Leica CloudWorx 2.1.1 AND Earlier Versions

Cyclone 7.2 databases are *NOT* backward compatible. Therefore older databases must be updated before using Cyclone 7.2 and can no longer be used with earlier versions. If you need to work with your data in older versions of Cyclone or CloudWorx, you should make an archive copy of your database(s) prior to upgrading. Since it can take some time to update and optimize Cyclone databases, we recommend that you optimize your databases overnight, particularly when multiple databases are involved.

Compatibility with Leica CloudWorx 2.1.1 AND PDMS Versions

CloudWorx 2.1.1 officially supports PDMS versions 12.1 and earlier. You may need the latest hotfixes; for version 12.0 you need at least PDMS12.0.SP6.55 hotfix and for 12.1 you need at least 12.1.SP4 hotfix.
